

TSR

TOBACCO STRING REMOVER

Cleaning of leaf tobacco without any
damaging effect.

Optimal removal of long-fibred foreign bodies from leaf tobacco and various blends.

The Tobacco String Remover is available in three sizes:

up to 4.000 kg/h	working width of rollers 800 mm
up to 8.000 kg/h	working width of rollers 1.200 mm
up to 10.000 kg/h	working width of rollers 1.500 mm

The **Tobacco String Remover TSR** is developed to remove long-fibred foreign bodies like strings or feathers from leaf tobacco and/or various blends. Cleaning of the tobacco is effected by 6/8 picking rollers lined with a food-proof “scraping” belt fitted with stainless steel pins. Foreign bodies are caught and held in the needles of the scraping belt without any damaging effect on the tobacco.

Cleaning the scraping belt from picked-up foreign bodies is a fully automatic procedure. A cleaning carriage fitted with rotating twin-brush-roller oscillates over the picking rollers to loosen the foreign bodies out of the scraping belt pins. A powerful vacuum cleaner sucks up the loosened fibres for collection into a suitable bag.

Cleaning carriage: Rotating twin-brushes clean the scraping belt from the collected foreign bodies.
